

Ambu® AuraGain™

DATASHEET

The Ambu AuraGain is a 2nd generation supraglottic airway which combines essential patient safety features with fast insertion times and high seal pressure capabilities, that facilitates the rapid establishment of a safe, patent airway.

Rapid placement

The original anatomical curve is performed to follow the anatomy of the human airway, and the soft rounded curve of the AuraGain ensures rapid placement.

High seal pressure

The thin and soft cuff of the AuraGain is designed to deliver high seal pressures - documented up to 40 cm H₂O.

Gastric control

The integrated gastric access channel is designed with a low friction inner surface to facilitate easy placement of a gastric tube. Introduce a gastric tube through the gastric access channel and into the stomach of the patient to enable active and passive management of gastric content, and prevent gastric insufflation.

Integrated intubation capability

The AuraGain provides the added safety feature of intubation capability. This means that in case of an unexpected difficult airway, or a "Cannot Intubate - Cannot mask Ventilate" (CI-CV) situation, where the objective is to intubate the patient, AuraGain can be used as conduit for direct endotracheal intubation assisted by a flexible scope (such as the Ambu® aScope).

All-round versatility

Rapid placement, high seal pressure, gastric access, and intubation capability make the AuraGain the obvious and safe choice for every procedure where a laryngeal mask is indicated.

KEY BENEFITS

Integrated gastric access channel for managing gastric content

The original anatomical curve

Intubating capability using standard ET-tubes

Integrated bite absorption area prevents airway occlusion

Pilot balloon identifies mask size and provides tactile indication of degree of inflation

Navigation marks for guiding flexible scope

MR safe
